Python for Informatics

Assignment 6

"URL Reader"

Description:

1. Rename the ***socket1.py*** program from our textbook to ***URL_reader.py***.
2. Modify the ***URL_reader.py*** program to use ***urllib*** instead of a ***socket***.
3. Add code that prompts the user for the URL so it can read any web page.
4. Add error checking using ***try*** and ***except*** to handle the condition where the user enters an improperly formatted or non-existent URL.
5. Count the number of characters received and stop displaying any text after it has shown 3000 characters.
6. Continue to retrieve the entire document, count the total number of characters, and display the total number of characters.

Deliverable:

Two files as attachments at our course shell assignment page. The first file should be a Python ***URL_reader.py*** file with the specified functionality. The second file should be a screenshot image file (.png or .jpg) demonstrating the correct execution of your program with an URL of your choice. Please ensure that your full name is specified as a Python comment at the top of the ***URL_reader.py*** file.
